

Main Roads WA services

FACTSHEET

Main Roads WA services in the Indian Ocean Territories

The WA Commissioner of Main Roads provides services on behalf of the Australian Government to achieve a safe, reliable and sustainable road network in the Territories by:

- assisting local governments to improve the management of their road network; and
- advising the Australian Government on road and road maintenance funding, programming and service delivery issues.

What does this mean for me?

As an IOT resident, your local governments have the support of Main Roads WA to ensure roads are maintained to the highest possible standard with the available funding. Main Roads has experienced practitioners that provide your local governments with advice, based on standards universally applied across the entire WA road network.

Main Roads has provided services to the Australian Government and the Indian Ocean Territory local governments since the early 1990s. Early services included support and advice with identifying and delivering road improvements, and to improve maintenance management, operations and skills. There is an ongoing commitment to this assistance, with the focus now primarily on road maintenance planning and delivery, plant and equipment maintenance and traffic engineering advice.
