Topic

Planned electricity outage: Wednesday 30 May 2012

Transelect manages the maintenance of the Jervis Bay Territory's electricity distribution network.

As part of its maintenance program, Transelect is due to carry out insulation resistance testing on the local substation.

Transelect has advised that the testing will require a rolling schedule of electricity outages. An outage is a temporary interruption to your electricity supply.

The Jervis Bay Village and HMAS Creswell Benson Road precinct will be affected by the planned outage to occur from

10.15am to 11.00am on Wednesday 30 May 2012.

Please contact the Jervis Bay Territory Administration Office on 4442 1217 if you have any concerns about this outage.
